

Medical Technology Expertise in the Fight against the Coronavirus

Fever, cough, runny nose and shortness of breath: these rather unspecific symptoms mark the beginning of the lung disease COVID-19, which is currently preoccupying the whole world. In about 80% of cases, those infected mostly develop few, flu-like symptoms with a mild course of disease. However, approximately 20% of those affected have severe courses. If the virus spreads to the lower respiratory tract, it can lead to a much more severe course of disease, so-called atypical pneumonia. Patients must often be hospitalised because the affected area of the lung swells and lung tissue fills with fluid. People affected by the disease have more and more difficulty breathing. To treat these patients, the following products from ATMOS MedizinTechnik can be used for life support:

Bronchial suction

ATMOS LC 27 Battery

- Intuitive and safe operation
- Mains-independent
- Quick and easy cleaning

ATMOS C / E 341 Battery

- Always ready to use
- High suction capacity
- Safe and portable

Digital cardiothoracic drainage

ATMOS S 201 Thorax

- Suitable for universal use
- Particularly powerful
- Large-capacity secretion canister (2000 ml)

ATMOS C 051 Thorax

- Compact and portable
- Simple operating concept
- 800 ml secretion canister
